Data sheet Psi values for windows

based on determination of the equivalent thermal conductivity of spacers by measurement

 $R \mid O \mid L \mid L \mid \bigcirc \mid T \mid E \mid C \mid H$

ROLLTECH A/S - an Alu-Pro Group Company

Rolltech A/S W. Brüels Vej 20 DK - 9800 Hjørring

Product name		Spacer height in mm	Material	Thickness d in mm
CHROMATECH ultra S		6.85	Stainless steel	0.10
		Spacer category B	Polypropylene	0.85
Representative glass constructions	Metal with thermal break	Plastic	Wood	Wood/Metal
Double-sheet insulating glass $U_g=1.1 \text{ W/m}^2\text{K}$	0.050	0.040	0.041	0.045
Triple-sheet insulating glass U _g =0.7 W/m²K	0.046	0.038	0.040	0.043
	Representative glass constructions Double-sheet insulating glass Ug=1.1 W/m²K	Representative glass constructions Metal with thermal break 0.050 Double-sheet insulating glass Ug=1.1 W/m²K 0.046	Representative glass constructions Metal with thermal break Plastic Double-sheet insulating glass U _g =1.1 W/m²K 0.046 0.038	CHROMATECH ultra S 6.85 Spacer category B Representative glass constructions Metal with thermal break Plastic Wood 0.041 Double-sheet insulating glass U _g =1.1 W/m ² K 0.046 0.038 0.040

Two Box model Characteristic values h_{2} h_{1} h_{1}	Space between panes	Conso habitana anno in man	$\lambda_{eq,2B}$ in W/mK	
	1	Space between panes in mm	Box $1 \cdot h_1 = 3 \text{ mm}$	Box 2 · $h_2 = 6.85 \text{ mm}$
		Can be used for all spacer widths	0.40	0.32

The equivalent thermal conductivity has been determined in accordance with the ift guideline WA-17engl/1 "Thermally improved spacers – Determination of the equivalent thermal conductivity by measurement". The representative linear heat transfer coefficients calculated in this way (representative psi values) apply to typical frame profiles and glazing for the determination of the heat transfer coefficient U_W of windows. They have been determined under the boundary conditions (frame profiles, glazing, glass mounting depth, back covering, primary and secondary sealant) defined in the ift guideline WA-08engl/3 "Thermally improved spacers – Part 1: Determination of the representative Psi value for window frame profiles". This guideline also governs the area of validity and application of the representative psi values. In order to avoid rounding errors, the psi values in the data sheet have been given at 0.001 W/mK. The method for the arithmetical determination of the psi values has an accuracy of \pm 0.003 W/mK. Differences of less than 0.005 W/mK are not significant. For further information, refer to the Bulletin 004/2008 "Guide to Warm Edge" of Bundesverband Flachglas.
